Venator set to boost performance at The Battery Show Europe **Visit Venator's battery experts at Stand B292, Hannover Messe, Germany – 15-17 May 2018**

Wynyard, UK – Battery producers looking to source high quality raw materials for the production of lithium-ion, lead-acid and primary-alkaline power packs should visit Venator at The Battery Show Europe in Hannover, Germany, in May.

Venator, previously Huntsman Pigments and Additives, is a leading name in the manufacture of high purity titanium dioxide pigments and performance additives, and produces and supplies a range of materials designed to boost performance in a variety of battery applications.

Products that will be promoted at The Battery Show Europe include HOMBITEC® BM – a family of titanium dioxide-based precursors for the production of lithium titanate battery anode materials. Venator's HOMBITEC® range for the battery industry includes a ready-to-use lithium titanate grade – HOMBITEC® LTO5. Used to replace carbon-based anodes such as graphite, lithium titanate can create safer lithium-ion batteries with an improved ability of fast charging and longer lifetime.

For lead-acid batteries, Venator produces a wide range of BLANC FIXE™ and SACHTOPERSE® barium sulphates that can enhance the in-service lifetime of negative active materials. Venator has been providing these materials to the market for many years, delivering benefits such as improved cold cranking and a longer lifespan for automotive and industrial batteries.

Russell Evans, Business Development Director at Venator, said: "With such powerful performance properties, interest in our products is increasing across a range of battery applications. In stationary energy storage, our products are used to make batteries that provide a back up power source for the utility industry. They are also popular in mobile applications to power forklift trucks and automated guided vehicles. Helping to deliver fast charge and discharge performance, our latest products for lithium titanate chemistry favour the needs of electrified public transportation systems of the future. But ultimately, whatever the application, we can support the needs of battery manufacturers through our extensive range of barium sulphate and specialized titanium dioxide materials."

If you are a battery producer looking to discuss a specific project, visit Venator's battery team at The Battery Show Europe at Stand B292. Alternatively, email: info@venatorcorp.com.

About Venator

Venator is a global manufacturer and marketer of chemical products that comprise a broad range of pigments and additives that bring color and vibrancy to buildings, protect and extend product life, and reduce energy consumption. We market our products globally to a diversified group of industrial customers through two segments: Titanium Dioxide, which consists of our TiO₂ business, and Performance Additives, which consists of our functional additives, color pigments, timber treatment and water treatment businesses. We operate 26 facilities, employ approximately 4,500 associates worldwide and sell our products in more than 110 countries.

Cautionary Statement Concerning Forward-Looking Statements

Certain statements contained in this press release constitute "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. These forward-looking statements represent Venator's expectations or beliefs concerning future events,

and it is possible that the results described in this press release will not be achieved. These forward-looking statements are subject to risks, uncertainties and other factors, many of which are outside of Venator's control, that could cause actual results to differ materially from the results discussed in the forward-looking statements.

Any forward-looking statement speaks only as of the date on which it is made, and, except as required by law, Venator does not undertake any obligation to update or revise any forward-looking statement, whether as a result of new information, future events or otherwise. New factors emerge from time to time, and it is not possible for Venator to predict all such factors. When considering these forward-looking statements, you should keep in mind the risk factors and other cautionary statements in the prospectus filed with the SEC in connection with Venator's initial public offering. The risk factors and other factors noted in Venator's prospectus could cause its actual results to differ materially from those contained in any forward-looking statement.
